Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.
2. This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.
3. In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.
4. Group I, claim(s) 1-6 and 9-11, drawn to a RE-TM alloy structure.
5. Group II, claim(s) 7-13, drawn to a method of making a RE-TM alloy structure.
6. Group III, claim(s) 14 and 15, drawn to a method of reducing rare earth method depletion on the surface of a RE-TM permanent magnet.
7. The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Claims 1, 7, and 14 are not inventive in view of Takahashi USPN 5,569,336. Takahashi teaches coating RE-TM acicular particles that form a permanent magnet with aluminum phosphate and agglomerating these particles in a binder. See Takahashi (Abstract; Figures 1-3; col. 2, lines 26-54; col. 6, line 15 through col. 7, line 58; and Claims 1-5). Takahashi suggests including Sm in the magnetic material and suggests coating with metal oxide ceramic binder. It would not have constituted an inventive step for one of ordinary skill in the art to provide a magnetic material having Sm and a coating of metal oxide ceramic binder since Takahashi suggests that effective articles are made in this manner. Since the subject matter of Claims 1, 7, and 14 is not inventive, there is no corresponding special technical feature among the three groups, from which it follows that there is no single general inventive concept among the groups, rendering a conclusion of lack of unity among the groups appropriate. Takahashi describes an alloy layer comprised of RE and TM elements. It would be expected that the curing of the phosphate and ceramic binder materials would result in "phosphate bonded ceramic."
8. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the

Art Unit: 1775

requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

9. The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.
10. Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.
